The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described are: (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended assembly system of strains of Salmonella, Escherichia coli and Enterobacteriaceae for the production of finbriae comprising recombinant AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2) directing recombination of a recombination of the chromosome of the homologous species, (3) directing recombination of a recombination of a recombination of a recombination of a recombination. Recombinant agfA gene having a segment replaced by a foreign DNA which encodes foreign epitope or antigen, expresses recombinant protein useful for eliciting immune response in animal. CC Regment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA, homologue fimbriae (SER17/TAF) nucleation depended CC AgfA, CsgA and AgfA, homologue fimbrian is subunits, respectively; (2) are the chromosome of the production of fimbriae comprising recombinant CC chomologous species; (3) directing recombinant gene into the chromosome of the comprising separating an amino acid polymer comprising a recombinant gene CC comprising separating an amino acid polymer comprising a recombinant agene CC comprising separating an amino acid polymer comprising a recombinant agene CC comprising separating an animal in conjunction with a carrier or diluent. (I) is collower into the expression of recombinant AgfA protein the the expression of recombinant AgfA protein which is useful for compared the heterologous antigens are presented in high numbers (up to compose the heterologous antigens are presented in high numbers (up to compose the heterologous antigens are presented in high numbers (up to compose the heterologous antigens are presented in high numbers (up to compose the inserted epitope, and hybrid fimbrin protein genesses both the carrier fimbrial subunit protein sare usually strong composers the inserted epitope, and hybrid fimbrine are easy and consensive to purify in large amount. The present sequence is given in the exemplification of the present invention

This invention describes a novel biochip comprising probe spots, each C containing many identical probes. The probes are nucleotide sequences of C 30-80 bases, are prepared ex situ from synthetic oligonucleotides and at CC least one includes a segment of at least 20 bases identical with, or C complementary to, a segment of an open reading frame (orf) of Escherichia CC coli k12. The blochip is used for specific detection of gene expression in k12 and for determining the gene expression pattern, e.g. for C diagnostic determination of which E. coli strains are present in the gut, and to determine the effects of e.g. growth media on gene expression. The CC diagnostic determine the effects of e.g. growth media on gene expression. The CC device, with simultaneous analysis of many different genes with a single device, and comparison of gene expression between K12 and its mutants or CC other E. coli strains in a single experiment. Apart from qualitative and quantitative information about gene expression, it also allows CC measurements of population densities for the various strains. The use of synthetic oligonucleotides for preparation of probes allows free CC variation in probe length and ensures high purity (and thus selectivity, cand reproducibility), also synthetic probes are generally CC shorter than probes prepared by polymerase chain reaction. This invention describes a novel biochip comprising probe spots, each containing many identical probes. The probes are nucleotide sequences of 30-80 bases, are prepared ex situ from synthetic oligonucleotides and at CC least one includes a segment of at least 20 bases identical with, or CC complementary to, a segment of an open reading frame (orf) of Escherichia CO il K12 and for determining the gene expression pattern, e.g. for cc diagnostic determination of which E. coli strains are present in the gut, and to determine the effects of e.g. growth media on gene expression. The CC diagnostic determination of which E. coli strains are present in the gut, and to determine the effects of e.g. growth media on gene expression. The CC penome, with simultaneous analysis of many different genes with a single device, and comparison of gene expression between K12 and its mutants or cother E. coli strains in a single experiment. Apart from qualitative and CC quantitative information about gene expression, it also allows for measurements of population densities for the various strains. The use of synthetic oligonucleotides for preparation of probes allows free CC variation in probe length and ensures high purity (and thus selectivity, reactivity and reproducibility); also synthetic probes are generally construct than probes prepared by polymerase chain reaction. CC This invention describes a novel biochip comprising probe spots, each CC containing many identical probes. The probes are nucleotide sequences of CC 30-80 bases, are prepared ex situ from synthetic oligonucleotides and at CC complementary to, a segment of at least 20 bases identical with, or CC coll KI2. The biochip is used for specific detection of gene expression CC in KI2 and for determining the gene expression pattern, e.g. for CC and to determination of which E. coll strains are present in the gut, CC diagnostic determination of which E. coll strains are present in the gut, CC genome, with simultaneous analysis of many different gene expression. The CC device, and comparison of gene expression between KI2 and its mutants or CC quantitative information about gene expression, it also allows are consuments of population densities for the various strains. The use of consuments of population densities for the various strains. The use of constitutive and reproducibility); also synthetic probes are generally to constitute than probes prepared by polymerase chain reaction. ACD68731 to in the invention

CC segment of the gene has been replaced by a segment of a foreign DNA CC sequence which encodes a foreign epitope or antigen. Also described are: CC assembly system of strains of Salmonella, Escherichia coli and CC AgfA, CsgA and AgfA-homologue fimbriae (SERI7/TAF) nucleation depended CC AgfA, CsgA and AgfA-homologue fimbria bunits, respectively; (2) cc homologous species; (3) directing recombinant gene into the chromosome of the back into the chromosome of the books species, replacing the native copy of that gene; and (4) eliciting an immune response in an animal, CC protein containing a replacement segment or segments of foreign amino CC Enterobacteriaceae host cell, from the host cell and introducing the cuseful for the expression of recombinant AgfA protein in the animal in conjunction with a carrier or diluent. (1) is eliciting an immune response in an animal in conjunction with a carrier or diluent. (1) is cliting an immune response in an animal. In a finbrial presentation consisting an immune response in an animal. In a finbrial presentation consisting an immune response in an animal. In a finbrial presentation the carrier fimbrial subunit protein possesses both the carrier fimbrial subunit proteins are usually strong cinexpensive to purify in large amount. The present sequence is given in the examplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁

                                                                                                                        The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                        Chang H,
Katagiri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1938/c

```

The present invention describes a recombinant agfA gene (I) where a segment of the gene has been replaced by a segment of a foreign DNA sequence which encodes a foreign epitope or antigen. Also described (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depende assembly system of strains of Salmonella, Escherichia coli and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC AgfA, CByA and AgfA-homologue fimbria subunits, respectively, (2)
CC AgfA, CByA and AgfA-homologue fimbrin subunits, respectively, (2)
CC homologous species; (3) directing recombinant gene into the chromosome of the homologous species; (3) directing recombination of a recombination of a recombination of a recombination of a recombinant gene and (4) eliciting an immune response in an animal, CC protein containing a replacement segment or segments of foreign amino
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coll or
CC interobacteriaceae host cell, from the host cell and introducing the acid sequence or sequences grown on a Salmonella, E. coll or
CC useful for the expression of recombinant AgfA protein which is useful for coliting an immune response in an animal. In a fimbrial presentation
CC System the heterologous antigens are presented in high numbers (up to System the heterologous antigens are presented in high numbers (up to communogenicity and adhesion properties relevant for an efficient live capainst the inserted epitope, and hybrid fimbria are usually strong conversed to purify in large amount. The present sequence is given in CC correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to composition and methods for detecting organisms CC of the Chlamydiaceae family, including species of Chlamydophila and CC chlamydia, in the persistent phase of their developmental cycle and for CC chadynosis of chronic or persistent infections caused by such CC organisms. The composition is useful for modulating the expression of CC gene such as pyk, mlpD, Cpn0585, a gene belonging to same regulatory/CC lipopolysaccharide biosynthesis. It is also useful for modulating the the CC level and/or functional activity of an expression product of these genes, CC cardiovascular system, respiratory tract, genital tract, reproductive atherosclerotic tissue or associated with multiple sclerosis brain CC system or composition is useful for treatment and/or prophylaxis of a CC atherosclerotic tissue or associated with multiple sclerosis brain CC chronic infection caused by an organism of the Chlamydiaceae family in a CC developmental cycle of an organism of the Chlamydiaceae family, is useful CC in the manufacture of a medicament, for treating and/or preventing CC chlamydiaceae infection in a patient. The present sequence is Chlamydiaceae of CC pneumoniae nipD gene. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

(I), the gene encoding EDN, ECE or EDNR (II) or a vector (III) expressing (I) (CC or (III) is useful for producing cells capable of expressing a molecular variant polypeptide which is associated with a cardiovascular disease. (CC (II), (III), the EDN, ECE or EDNR polypeptide, or a cell expressing a cc obtaining a pro-drug or drug capable of modulating the activity of a molecular variant of a polypeptide of the EDN/ECE signaling system (CC extivity of a molecular variant of a polypeptide of the EDN/ECE signaling system (CC signaling system or its gene product. The isolated proteins and (CC pharmaceutical composition for treating a cardiovascular disease such as (CC pharmaceutical composition for treating a cardiovascular disease such as (CC coronary heart disease, hypertension, atherosclerosis, or related to (CC EDN/ECE/EDNR signaling system are useful as foremaic markers, for (CC comprising and transgenic animal and in creation of a solid support (CC comprising polymucleotides, genes, vectors, polypeptides, antibodies or facts ells of the invention. This sequence encodes the cardiovascular countries of the specification but has been obtained from GenBank using information (CC of the invention) and the sequence does not appear in the invention (CC of the invention) and the sequence of the cardiovascular (CC of the invention) and the sequence of the cardiovascular (CC of the invention) and the sequence of the cardiovascular (CC of the invention) and the sequence of the sequence of the invention (CC of the invention) and the sequence of the sequence of the invention (CC of the invention) and the sequence of the sequence of the invention (CC of the invention) and the sequence of the seq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC copy of that gene; and (4) eliciting an immune response in an animal, CC comprising separating an amino acid polymer comprising a recombinant AgfA protein containing a replacement segment or segments of foreign amino CC acid sequence or sequences grown on a Salmonella, E. coli or CC Enterobacteriaceae host cell, from the host cell and introducing the CC polymer into the animal in conjunction with a carrier or diluent. (I) is CC useful for the expression of recombinant AgfA protein which is useful for CC eliciting an immune response in an animal. In a fimbrial presentation CC system the heterologous antigens are presented in high numbers (up to CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the CC immunogenicity and adhesion properties relevant for an efficient live vaccine, the carrier fimbrial subunit proteins are usually strong CC immunogens, which may be important for directing an immune response CC against the inserted epitope, and hybrid fimbriae are easy and CC inexpensive to purify in large amount. The present sequence is given in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents an isolated agfA gene fragment derived from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic acid can be used to provide diagnostic assays for Salmonella and/or enteropathogenic bacteria of the family Enterobacteria. It can also be used to provide proteins and antibodies which can be used for assays. The nucleic acid sequence can be used to provide probes or primers which can specifically hybridise to nucleic acid molecules from greater than 99% of Salmonella strains that are pathogenic to warm-blooded animals relative to nucleic acid molecules from virtually all other microbial organisms. (Updated on 25-WAR-2003 to correct PF field.)

                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score

Sequence 1, Application US/09198452A

Patent No. 6559294

GENERAL INFORMATION:

APPLICANT: Griffals, R.

TITLE OF INVENTION: Chlamydia pneumoniae genomic seq

TITLE OF INVENTION: thereof and uses thereof, in pa

TITLE OF INVENTION: and treatment of infection

FILE REFERENCE: 9710-003-999

CURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT FILING DATE: 1998-11-24
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         US-09-643-990A-1

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de JOng's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was Constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the

/note="Organ: whole embryo; Vector: pBluescript II KS(+);
Site_1: EcoRI; Site_2: Not1; This normalized library was
constructed from 1 million independent clones. cDNA
synthesis was initiated using an oligo (dT) primer, using
methylated C in the first strand synthesis reaction.
Following this first strand reaction, double-stranded cDNA
was blunted, ligated to NotI adapters, digested with
EcoRI, size-selected, and cloned into the NotI and EcoRI
compatible sites of a custom modified MCS of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /clone_lib="Nori Satoh unpublished cDNA library, young
